SUMMARY OF QUALIFICATIONS

- Extensive experience with databases, data warehouses and SQL.
- Strong Python skills using VS Code. Ran SQL queries, made web API requests to retrieve data, created GUI's, developed REST API's, loaded Excel and XML files into pandas dataframes, read and wrote to Excel files with openpyxl, created formatted PowerPoint slides automatically, created virtual environments, automated batch jobs, etc. All can be viewed on my GitHub.
- Extracted data from Hadoop with Dremio / Hive and created VDS's.
- Fitted logistic regression models using both SAS and PySpark ML.
- Expert at SAS (Enterprise Guide and Viya) -- adapted legacy SAS code for Viya, created stored processes and ETL's and truly mastered SAS macros. Created dashboard with SAS/GRAPH and reports with Proc Report.
- Strong with predictive modeling and data analytics and familiar with actuarial analyses and actuarial reports.
- Expert at MS Excel, created advanced spreadsheets with VBA macros, automated charts and graphs.
- Most of my experience is in the insurance industry (15+ years). Created various loss triangles, estimated ultimate claims from LDF's, calculated ceded losses from reinsurance contracts, calculated earned premiums, created reports on loss ratio and in-force policies and performed reconciliation with the general ledger.
- Exposure to accounting principles – using the GL Oracle database, created YTD summary reports with array formulas in Excel to support quarterly filings (10-Q and 10-K) and performed account and profit center level reconciliations with it.
- Graduated in Math / Statistics from the best university in Brazil (U of São Paulo).
- Very analytical, self-taught, can work independently.
- U.S. citizen (had a green card through NatGen previously).

SOFTWARE

- **Databases**: Oracle, Teradata, SQL Server / SSMS and their IDE's.
- **Big Data**: Snowflake, Databricks, PySpark, Hadoop, Dremio, Hive.
- **Programming**: Python, VBA, VBScript, Unix/Windows batch scripting.
- **Cloud**: Working knowledge of AWS, Azure and GCP.
- **SAS:**
  - Platforms**:** Unix, Linux, Windows Server and Viya (Cloud).
  - Modules: BASE, STAT, GRAPH, ACCESS, CONNECT.
  - Expert knowledge of most used SAS PROCS, including Proc Report. Advanced macro language and stored processes.
- **BI / Predictive Modeling:** SAS Enterprise Guide, Power BI.
- **Code Editors**: VS Code, Jupyter Notebook.
- **Other:** Excel, PowerPoint, SharePoint, Git, RegEx, Jira, XML, JSON.

PROFESSIONAL EXPERIENCE

Wells Fargo
Senior Data Analyst (remote / hybrid) **10/2022 – 12/2025**

- Second project (*hybrid*)
  - Worked on AML / Financial Crimes remediations (CIP / BO / CDD / KYC).
  - Built AML remediation populations (Trust, NRM4 and transportation assets).
  - Created population identification workbooks and waterfall charts and presented them to senior directors for approval.

- Wrote complex optimized SQL queries to extract data from Hadoop using Dremio and Hive and from various databases (Teradata, Oracle, SQL Server, DB2, etc.). Was a go-to person for challenging technical questions.
- Interpreted complex business requirements and translated them into efficient SQL and SAS logic for data extraction, validation, and reporting.
- Developed SAS and SQL code for ad-hoc data extraction, validation, reconciliation, and regulatory reporting.
- Created SQL/SAS validation test scripts and partnered with QA to validate code, investigate discrepancies, and document expected results.
- Validated and reconciled AML remediation populations across multiple source systems, investigating record-level discrepancies and documenting root causes prior to production release.
- Performed data quality validation and reconciled SQL/SAS outputs against business requirements to ensure accuracy and completeness of populations.
- Partnered with business stakeholders and QA to analyze, document, and resolve data discrepancies.
- Supported defect identification, root cause analysis, and regression testing during code enhancements, reducing production issues and improving data quality.
- Produced well-documented validation artifacts and SQL/SAS evidence supporting remediation decisions and regulatory deliverables.
- Modified SAS programs to execute in the SAS Viya environment.

- First project (*remote*)
  - Worked on customer remediations, responsible for the creation of the final artifacts from which refunds and letters are issued to customers as required by regulators, following strict Confluence procedures.
  - Managed SAS code used to create final remediation artifacts, made changes to the code to add enhancements, optimize performance and minimize the number of defects and findings in peer reviews. As an example of enhancement, when a new analyst takes over a remediation, all the artifacts and SAS tables created by the previous analyst are automatically saved to a new subfolder as backup.
  - Created ETL's to produce new artifacts by mapping fields from the execution data requirements (EDR) to data tables. Contributed to design artifact layouts.
  - Used GitHub for code version control and sharing and DMS as a secure repository for storing and sharing artifacts.

Truist, Charlotte, NC

Data Analytics SQL/Python (contract / remote) **09/2021 – 03/2022**

- Created rules based decision tool for the compliance and data analysts to choose their optimal analytics application as a web form created in Python.
- Created and maintained current report on user accesses for the various proprietary applications and data repositories (AD, ACL), for compliance.
- Ran reconciliation between ServiceNow/RITM and data pulled from the mainframe to assess correctness of an automatic ticket creation process for abends (abnormal job termination), and presented findings with PowerPoint.
- Ran SQL queries in Snowflake to extract data from the data lake/data warehouse.
- Created reports using the SAS grid and produced documentation following internal templates.

Florida Blue, Jacksonville, FL

SAS/Python Developer (remote) **04/2020 – 08/2021**

- Developed ETL code to extract data from Oracle, DB2 and others, using SAS 9.4 on AIX (Unix) and Enterprise Guide.
- Extracted data from multiple sources to create agent fraud detection report for the SIU department. Created macro to automate the report with Proc Report.
- Automated and scheduled various SAS ETL jobs in Unix, using a SAS macro.
- Used HTML syntax in SAS to compose rich text e-mail alerts.
- Combined Windows batch, WinScp and VB scripts to schedule jobs and automate file transfers and moving data between platforms using SFTP.
- Created a neat SAS stored process for various canned reports.
- Created visualizations and reports using Power BI and Python.
- Gave training to team members on how to design SAS stored processes.

National General (Allstate), New York, NY
Insurance Data Programmer / Data Manager **04/2015 – 12/2019**

- Reported to the holding company's chief actuary.
- Mastered the claims data system of the company (EPIC) and legacy data stored in Oracle and SQL Server databases.
- Planned and created datasets in SAS by extracting and combining data from various databases, from which loss triangles and data analytics were produced.
- Created actuarial loss triangles used in reserving analyses with SAS macros, and reconciled the numbers with the company's general ledger.
- Created quarterly company-wide YTD summary report in Excel using general ledger data extracted with BI Discoverer to support quarterly filings and the annual report preparation (10K, 10Q), for the SEC and other regulators.
- Participated in a project to load claim and policy level data into the GL Oracle db.
- Extracted data from the SAS server to create reports with SAS macros and code. These reports were provided to consultants, auditors and regulators.
- Ran statistical data analyses to track performance of products.
- Created complete documentation about legacy data from acquired companies.

AIG, New York, NY
Data Scientist / SAS Programmer **12/2011 – 12/2014**

- Planned and extracted data from multiple sources (mainframe, DB2, SQL Server and Oracle) to produce SAS tables used in reports, models and processes.
- Created ETL's to read VB/VSAM files on IBM mainframe and load them into SAS, which became the data foundation of the Global Actuarial Pricing.
- Wrote SAS macro to create a wide variety of loss triangles used to derive LDF's and estimate ultimate claims.
- Worked in the deep dive and profitability analyses of the book of business, by extracting data on losses and premium to generate various reports and metrics and to monitor the performance of the lines of business and segments.
- Created algorithm for linking policies in SAS. This policy linking was the basis for the creation of a scoring model called AQI (Account Quality Index).
- Worked with Deloitte consultants and provided them with loss triangles for the Commercial Auto pricing tool. Also worked on the Specialty Worker's Comp model, ensuring that deliverables such as SAS code, data and results of the predictive model met the requirements.

EDUCATION

Master's in Statistics - University of São Paulo, Brazil
Bachelor's in Statistics - University of São Paulo, Brazil
Bachelor's in Mathematics - University of São Paulo, Brazil
